

**County of Paintearth Rural Water Distribution Planning
The Responses Given Will Be Critical for Future Development**

The County developed a rural water distribution plan and is now reviewing. In the past surveys have been done to determine need and those who would connect to the water line. Some changes have taken place regarding regulations and interest in connecting to the water line since initial construction and are now asking for your input.

The water connection fee is \$7,500 and is charged to each meter installed to the property line. The benefits to having access to potable water to each or certain parcels beyond the home quarter may be of interest, so we are asking that a survey be done for each parcel that you would like a water connection.

To design a water transmission system it is important to know the water demand. Funding is limited for rural water projects so it is important that what projects do proceed are done so with the best knowledge. The information that you provide will allow the County to identify how we can proceed to best serve our residents based on the demand and their locations for future development.

Question 1

Legal Land Location (for example, NE 24-37-14 W4)

Question 2

Will you connect to the water line?

- 1-3 years
- 4-6 years
- 7-10 years
- No interest

Question 3

How many residences per parcel?

- 1
- 2
- 3
- 4

Question 4

Will you require more than one water meter on this parcel?

- Yes
- No

Question 5

To help determine potential volume, what is the intended use? (More than one answer can be given)

- Residential
- Residential/Farm
- Commercial

Question 6

When will the connection be in use?

- Immediately
- Future development

Thank you for responding to our survey! Please inform others of the survey as the more responses we have the better decisions we can make for future development. Those that are not interested are just as important as those that are. Responses will be collected until May 17, 2015
